14 Weeks

CASE STUDY

UHS - Game Changer

About the Project

We recently completed a significant refurbishment project at The University Hospital Southampton to improve the quality and functionality of 40 staff rooms across various locations within the hospital.

The project was undertaken in a live environment, so ensuring minimal impact on the daily operations and well-being of the healthcare facility was paramount. The project was executed in two distinct phases, with each phase allocated 20 staff rooms in a strict timeframe of seven weeks to ensure minimal disruption to staff and patients.

The following key activities were undertaken:

- Isolation of Electrics and Mechanical Systems:
- Fixture and Fitting Removal:
- Internal Fit-Out:
- Kitchenette Installation:
- Worktop Templating and Installation:
- Electrical and Mechanical First Fix:
- Mechanical Second Fix:
- Shelf, Coat Hook, and Wall Cladding Installation:
- Wall Preparation and Decoration:
- Worktop and Basin Installation:
- Roller Blind Installation:
